

EXTINCT!

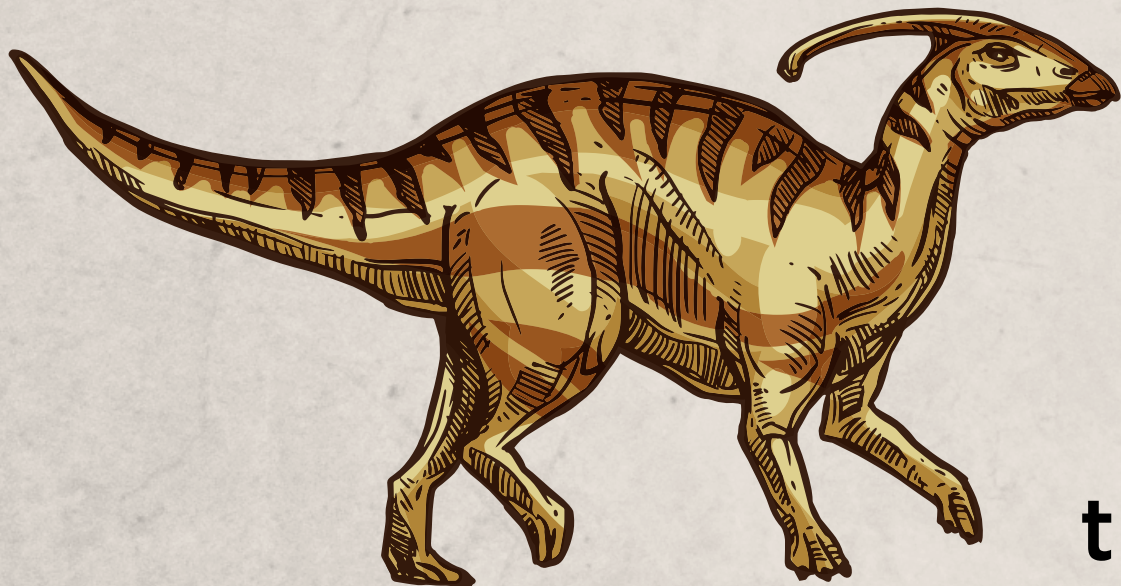

THERE IS NO SUCH THING AS A PTERODACTYL!

It is unclear when pop culture determined to use the name pterodactyl, but the extinct creature is actually called a pterosaur.

THE BIGGEST AROUND

It is believed that the Argentinosaurus weighed up to 100 tons which is the same as around 15 elephants!

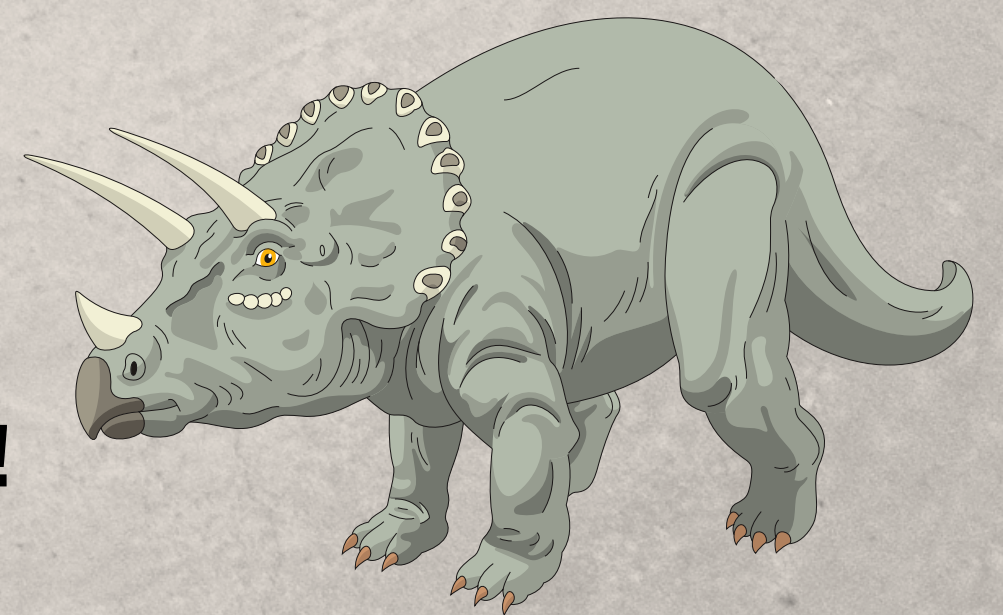

CAN I JOIN THE BAND?

The Parasaurolophus was musical! Paleontologists think air could move through the crest and make low sounds like a trombone!

MORE LIKE BI-CERATOPS

The Triceratops actually only had two horns. The "horn" on its nose was made of keratin--the same thing your fingernails are made out of!

THE DODO'S LAST STOP

The last known sighting of a dodo bird was in 1662--which was also the first year people tried to use a public bus!

HOW OLD ARE YOU?

Scientists can determine the age of a woolly mammoth by counting the rings in their tusks--just like they count the rings in the trunk of a tree!
